Leading Information Security firm to present at Indiana Business College

IP3 Inc., widely recognized as the nation's leader in information security education and research, will be conducting a two-day workshop on Tuesday and Wednesday, March 15 and 16, on cutting-edge issues in internet and information security. The seminar, *From Strategy to Reality: Implementing a Policy Centric IT Security Architecture*, is being held at the Indianapolis campus of Indiana Business College at 550 E. Washington St.

Security is a significant and growing concern in information technology. This comprehensive and timely program is designed for IT staff and corporate executives facing critical issues such as:

- firewalls and perimeter defense
- wireless deployment
- ever-more-invasive spam

- internal theft of intellectual property
- Sarbanes-Oxley compliance
- cryptokey management
- securing VoIP

“Indiana Business College is proud to host this nationally recognized IT security seminar at our college,” says Pat Mozley, IBC Indianapolis Campus Regional Director. “We currently offer one course in Network Administration and Security in our Business Administration/Network Technology program,” she explains. “But we are in the process of reengineering our IT programs, and security is certainly one of the major elements that we are looking at incorporating more deeply into our curriculum.”

Ken Kousky, IP3 CEO says, “We are pleased that Indiana Business College is committed to bringing vital educational programs to the markets they serve, and this IT security seminar represents a joint step in the right direction. Both private industry and government can gain a wealth of insight from this area of study, and the partnership of private industry expertise and an established educational institution provides an invaluable means to deliver the lessons learned.”

This workshop provides a balance of theory and real-case scenarios to demonstrate how security systems have been breached and what solutions are out there to prevent it from happening to local businesses and organizations.

Cost to attend the seminar is \$795. For course outline, registration information, event location information, and agenda for this intensive two-day overview on the latest security vulnerabilities and technologies, visit www.ip3seminars.com. Seating is limited, so those interested are encouraged to register soon. It will not be necessary to bring along a computer. A light breakfast will be served, and is included in the tuition.

IP3 Seminars is a subsidiary of IP3 Inc. (www.ip3inc.com), the leader in Intellectual Publishing, Sales, and Distribution. IP3 Inc. provides a full range of services targeted at assisting emerging and expanding technology companies including: strategic product guidance on modifying the IP product, educational marketing, technical training, product support, and channel development and management.

Indiana Business College is a two-year Associate of Applied Science degree-granting institution that concentrates on career-focused education. It has been educating students for more than 100 years, and today offers more than 20 programs across its 10 Indiana campuses, as well as delivering many courses online. IBC graduates can immediately enter their chosen field upon graduation, and/or continue their education by pursuing their Bachelor's Degree through IBC's transfer and articulation agreements with four-year colleges.
